

RAG Test Document - Company Overview

Acme Robotics is a fictional technology company founded in 2018. The company develops warehouse robots, inventory software, and computer-vision systems for logistics companies.

Products and Technology

Acme Robotics has three main products: RoboPick, StockVision, and FleetManager. RoboPick is an autonomous picking robot used in warehouses. StockVision uses computer vision to count inventory. FleetManager is software used to monitor and schedule robot fleets.

Financial Information

Acme Robotics reported fictional revenue of 25 million dollars in 2024.

Revenue increased to 32 million dollars in 2025.

The company plans to invest 8 million dollars in research and development during 2026.

Employees and Locations

Acme Robotics had 420 employees at the end of 2025.

Its fictional headquarters is in Bengaluru, India.

The company also operates engineering offices in Pune and Hyderabad.

Future Plans

For 2026, Acme Robotics plans to launch a smaller warehouse robot for small and medium-sized businesses.

The company also plans to expand its computer-vision platform to support quality inspection in manufacturing.
